

What's in your ducts?
**Improve both occupant
& building health with
hygienic duct cleaning
& HVAC services.**

The TOTAL Hygienic System Solution

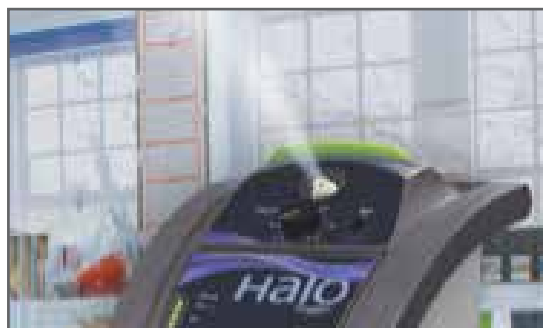

We use specialized equipment inside of the ductwork to create high pressure air turbulence that dislodges built-up dust and debris to be collected by an industrial strength vacuum system with HEPA filter.

If your ductwork has fiberglass insulation that's deteriorating we can replace it with our PURE-Cell insulation or coat it with a stabilizing, antimicrobial paint.

The HVAC unit is then environmentally cleaned with our proprietary PURE-Steam process. High temperature and low pressure steam disinfects the inside of the unit and clears clogged coils to restore optimal airflow and energy efficiency!

Next we can perform our PURE-Decon room disinfection service to kill any bacteria, mold or yeast that may still be lingering in the indoor environment, waiting to be reintroduced into the ventilation system. It fogs the area with a fine, dry mist of hydrogen peroxide and silver that is effective at the cellular level.

In combination, these services provide a total hygienic cleaning to ensure the health, comfort and energy efficiency of your facility!

Why Pure Air Control Services?

Have your ducts cleaned by the best in the business. We are a mechanical contractor, license CAC057992 and an active member of National Air Duct Cleaning Association (NADCA).

Your HVAC system is in safe hands. With over 30 years of expert experience in Commercial & Residential Duct Cleaning, and an extensive network within the AC industry, we are the company you can trust.
