Overview

U.S. Flood Control Corp. is the sole manufacturer of the Tiger Dam flood protection system. This emergency rapid deployment flood protection system is unique, affordable, and effective. The Tiger Dam™ System consists of flexible tubes which can be quickly joined end to end, stacked and filled with water. The pyramid-shaped structure forms a barrier to protect buildings, utilities, infrastructure and any other facilities prior to the onset of a flood.

The dams can be filled with a fire hydrant, transfer pump, water truck or any other water source. They are capable of being stacked to a maximum height of 32 feet, and can be linked together seamlessly for miles. Tiger Dam™ is flexible – it can be turned and bent into any shape.

When deployed properly, the Tiger Dam™ System can divert up to 100% of floodwaters. This system can be assembled in minutes using floodwater or any water source with the help of as few as two people.

The Tiger Dam System™ is environmentally friendly and leaves no footprint.

The Tiger Dam™ system is reusable and eliminates the need for sandbags. Tiger Dams can be used year after year, flood after flood. Minimal storage is required when not in use. Once sandbags are contaminated, they are dangerous to the environment and expensive to dispose of. The patented Tiger Dam™ System is the only thing you need for your fight against floods.
