Overview

Def-Logix, Inc. provides innovative technological services and solutions to our customers. Def-Logix is an 8(a) certified small business headquartered in San Antonio, TX, offering 14 years' experience in specialized professional services in cybersecurity, with an emphasis in software architecture and engineering. Our focus on research and development has allowed us to advance state-of-the-art, developing technologies and products that serve the critical and immediate needs of our government and commercial customers. We are an emerging leader in the provision of information assurance, intelligence, and information technology services to the Defense, Intelligence and Commercial communities. We have successful experience being sub-contractors and prime contractors to other small and large businesses on various Federal Government contracts. Our insight to government customer needs has led us to perform and meet their requirements through the successful deployment of our custom software solutions and modules onto Air Force systems and through existing DoD HBSS infrastructure. Our corporate experience servicing government clients consists of integrating and developing applications for red and blue team functions. We also focus on network forensics, intrusion detection/prevention and exploit detection/prevention. Through successful demonstration, these products are capable of monitoring system firmware and detecting malware before it can cause harm to an organizations most critical asset: their data.

Our employees consist of software developers and IT engineers capable of handling complex solutions. We have a total of 66 employees with 86% of those being IT professionals who continue to expand their Cybersecurity background each day. Def-Logix will provide highly trained software security professional developers and engineers who each have proven, in-depth technical expertise. Our team has over a century of combined analytical and operational skills experience demonstrated through years of knowledge, by related past job performance in support of commercial and government projects. A team comprised of majority former military personnel/family and former government employees, our employees leverage their familiarization with the government's high desire to produce stable and functional products to protect the government's infrastructure. Our staff has a range of unique technical stacks that provide hands-on skills, engineering knowledge, system engineering, technical depth, software development, analytical expertise, network operations, cybersecurity procedures/techniques, white-hat hacker prevention methods, and operational experience.

and organizational controls. These organizational controls, besides maintaining authority, help every individual become aware of where they stand within the organization allowing everyone to come together and work better as a unified team. As a small business Def-Logix relies on specific configurations to our QuickBooks account that allow us to remain DCAA compliant. Although our Accounting System is DCAA compliant, as a Small Business Concern our audit requirement is waived by DCAA/DCMA due to the volume of our contracts. Def-Logix is committed to promoting participation of small, small disadvantaged, veteran-owned and women-owned small businesses in our GSA contracts. We pledge to provide opportunities to the small business community through reselling opportunities, mentor-protégé programs, joint ventures, teaming arrangements, and subcontracting. These opportunities will be presented, as they arise, to favor local businesses in aims to promote our community's small business development.
