Overview

For the last 15 years, we have focused on providing unique solutions to some everyday problems that building owners are faced with. During this time, we have repaired and restored millions of square feet of roofs. The systems we use are cost effective, energy efficient and they work. The systems address the common points of failures found in traditional roofing. Over the last 3 years, we have increased our focus to address the challenges of creating healthy buildings particularly in the age of COVID. The CIMR technology goes beyond COVID, helping to control many causes of flu and illnesses, including mold and mildew. These disruptive technologies help us get away from the "way we have always done things" to actually solving these longstanding problems, enabling building owners to focus on other issues. We have very niched approaches to addressing these challenges and provide prompt service when called upon. We price ourselves in developing relationships that last for a long time. We want to be the solution for the long haul. This builds trust and better ensures good results. Roofing and indoor air are constant challenges. We have the technology and experience to bring better solutions to these everyday problems.
