Overview

Founded in 2016, Livingston Energy Group, LLC ("Livingston") is a New York-based energy service and technology company, providing a full suite of services and equipment for the installation and management of electric vehicle ("EV") charging stations and the required power and supporting infrastructure. The company is working with utilities and government agencies to assist organizations including municipalities, universities, school districts, institutions, developers, and owners of commercial, industrial, and high-density residential properties with the adoption of more efficient technologies, including supporting EV infrastructure. The EV stations can serve for private or public charging, as well as fleet charging. In addition to the well-established charging station solutions currently offered, the company is actively committed to both hardware and software development, specifically aimed at improving both the station's property owner and driver experiences. By incorporating various models of Level II AC and DCFC equipment with custom station management and e-mobility platforms, we are utilizing this unique position to pilot new equipment technology and software modules. Livingston, along with its sister organization's staff of electrical engineers, software developers, and data analysts, is in pursuit of incremental and breakthrough developments that can be tested on the growing charging network.

Livingston, through its Livingston Charge Port™ equipment and software solution, is dedicated to enabling the future of sustainable and cost-effective EV charging infrastructure and securing a robust EV charging network for all EV charging station owners, drivers, and stakeholders. We provide a variety of equipment accompanied by a warranty and a network solution, assisting the customer in choosing the right equipment and ownership model for them. Our Team will go above and beyond in making sure that the customer's needs and expectations are met.
