### Overview

*We, at Spraying Systems Co., the world's leading manufacturer of spray nozzles, components, and assemblies, have expanded our services to include complete turn-key cleaning system solutions. Spraying Systems Co. has helped industries with cleaning applications for more than seventy years. Using that knowledge and experience along with new innovative development of specialized systems, controllers and software Spraying Systems Co. has been helping the hospitality industry, food, beverage, pharmaceutical, paper, chemical, and transportation companies clean faster and more thoroughly. It is our goal to help customers solve complex application problems with innovative, high-quality spray technologies. All of Spraying Systems Co. installations are supported by local sales engineering offices. Our local representatives are experienced at defining, specifying, and troubleshooting all types of spray equipment. Their expertise can be of great value to your process. The PathoSans Cleaning System converts plain water and salt into Sodium Hydroxide (NaOH) and Hypochlorous Acid (HClO) solutions that are used for surface cleaning, pathogen destruction, and biofilm removal. The system is designed to automatically and on-demand produce both solutions that can be immediately used or stored in tanks for later use. The composition of both substances is tightly controlled during production to maintain the specific concentrations required for the application.*
