Overview

Wyebot's *Wireless Intelligence Platform™ (WIP)* is a vendor-agnostic WiFi and Wired quality assurance solution that is deployed as an overlay to an existing WiFi infrastructure. It consists of WIP™ sensors and WIP™ Cloud Portal with embedded Artificial Intelligence, running in a regional AWS Cloud. WIP™ supports learning with high-performing, problem-free WiFi Networks, by providing complete wireless ecosystem visibility, AI-based automated problem and solution identification, historical forensics, wired and wireless network testing, and support for WiFi-6E. It proactively alerts schools to network issues, empowering IT to address problems before students and teachers are affected. Ending the time-consuming, manual process of network optimization; restoring time, money, and energy to IT teams and their schools.
