Overview

Nano PCO distributes air purification systems that improve indoor air quality through a multi-stage PhotoCatalytic Oxidation process. Using UVC light and photocatalytic cell technology rather than filters, traps or repeated spraying. The patented solution on the reactors and specific bulbs used create the optimal photocatalytic oxidation process with zero Ozone emissions or harmful byproducts. We don't just filter or trap harmful pathogens we kill them. Nano PCO systems remove and degrade harmful indoor pollutants, organic and inorganic carbon based material including viruses, bacteria, fungi, mold, dust, pollen, mildew and much more. Disinfects and removes odors, off-gasses and smoke as well. Nano PCO models range from small portable plug and play versions to inline induct models installed directly in new or existing HVAC systems. Nano PCO PhotoCatalytic Oxidation systems provide a permanent defense against airborne pathogens, 24/7/365 while also disinfecting the surfaces in a covered area.
