### Overview

*The SECTRA anatomy visualization table significantly improves medical education with real patient cases and pre-operative planning with patient visualization tools.*

*SECTRA Table is a large interactive screen with an image display system that enables interaction with 3D human body images rendered from CT or MR. Detailed studies of virtual bodies from real patient cases provide medical students with a better understanding of anatomy functions and variations between individuals. Users can visualize skeletal tissue, muscles, organs and soft tissue by virtually slicing, segmenting or peeling off layers of tissue. In addition to the real patient cases, an extensive anatomy atlas is also included.*

*Moreover, 3D views give surgeons a unique possibility to become familiar with their patients' anatomy prior to surgery. Without invasive intervention, the surgical team can localize vessels, muscles and skeletal tissue and thus plan the surgery more efficiently. It increases quality in surgery and reduces operation and rehabilitation time as unplanned issues can be avoided.*
