### **Overview**

*Tiger Dam flood control technology is changing the approach to preserving infrastructure by protecting buildings, keeping interstates and highways accessible, and allowing utilities to function during storms. The system was designed for rapid deployment ahead of a flood event, eliminating the need for heavy equipment and extensive labor, thereby reducing time and saving money. The system is easily reusable.*

*Tiger Dams are a water-filled temporary barrier system. They are designed to take any shape, and are the only engineered system that can be joined from just a few feet to 100's of miles long, it is the only flood control system that can be stacked up to 32 ft. high. Tiger Dams are FM Approved.*
