Overview

Based in Saginaw, Michigan, we perform onsite scanning of books and microfilm for County Governments. With over 48 years experience, we have served over 1,000 Counties.

We developed unique technology that allows our experienced staff to enhance specific areas of TIFF pages to create the most legible images possible. We are a beta test site for several scanner manufacturers. This provides us with the opportunity to utilize state of the art technology 6-12 months before our competitors. We constantly test and upgrade equipment to the best available on the market at any given time. We have developed unique capture, indexing, and enhancing software called ImageXpert, retrieval software called ImageXpress, inspection and approval software called ImageReview. Due to our vast experience and partnerships, we are familiar with nearly every County system on the market. County records are irreplaceable and extremely valuable. As such, it is our practice to scan all media on-site. All images are captured in 300dpi color/grayscale to obtain images with 100% of the details contained in the original. We have developed a 3 Stage process that produces the highest quality images and most accurate indexing in the industry. In addition to scanning, we also provide digital image archiving, document indexing and storage services. We provide free samples and estimates for all our services. Please contact us to get your project started!
